DETAILED ACTION

The applicant's response filed April 23, 2004 to the Office action has been entered.

Claims 1-2, 5-11, 13-28, 30-33, 66 and 69-72 are pending.

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on April 23, 2004 has been entered.

Claim Rejections - 35 USC § 112

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter, which the applicant regards as his invention.

3. Claims 1-2, 5-11, 13-28, 30-33, 66 and 69-72 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

a. Claims 1-2, 5-11, 13-28, 30-33, 66 and 69-72 are vague and indefinite because of the phrase "substantially reduced". It is unclear what is the definition of the phrase in the specification. Since the claims are drawn to the method using the mutated DNA polymerase to reduce in the ability to add one or more non-templated nucleotides to the 3' terminus of a synthesized DNA molecule, the ability of the mutated DNA polymerase to reduce adding one or more non-templated nucleotides to the 3' terminus of a synthesized DNA molecule is important to the instant invention. Clarification is required.

Art Unit: 1637

b. Claim 33 is vague and indefinite because of the phrase "the method of claim 31", since claim 31 is a kit claim. Clarification is required.

4. U.S. patent NO. 6,090,590 is made of record as reference of interest since Kao discloses a method, which reduces non-template 3' nucleotide addition to a transcript (See column 2, lines 8-22).
